BIO-COZYME

- A 100% organic biostimulant that enhances a plant's ability to absorb and utilize nutrients.
- Derived from natural occurring cytokinins, hormones, enzymes, vitamins, amino acids and micronutrients.
- Works by enhancing the plant's ability to control the movement of nutrients through the stem and leaves, and augments the existing enzyme functions in the plant.
- Increases the synthesis of chlorophyll, stimulates cell division and lowers the activation energy required for reaction/completion at the cellular level by providing a source of efficient biological electron bridges which play a vital role as catalyst of respiration, oxidation and control of internal plant metabolism.
- Induces a more robust plant which helps push crops into extra production-the result of which is bigger yields of higher quality fruits, vegetables, and grain crops.

DIRECTIONS:

**SHAKE WELL & DILUTE BEFORE USING
STORE BELOW 110°F**

Hydroponic: Use 2 to 4 ozs per 90 to 100 gallons of water.

Nursery/Greenhouse Flowers: Helps initiate flowering and improves bud set, bud count. For hand watering: use 1 oz per gallon of water, apply as soil drench (3 applications recommended). For fertilizer injector system: use 2 quarts per 80 gallons of water or in fertilizer tank, inject at 1:50 ppm.

Starter: As a young plant starter, for seedling, newly set rooted cuttings and transplant: use at the rate of 1 oz per 1 to 3 gallons of water per 1,000 sq. ft. Apply the solution directly into planting mix, or use as part of watering solution. Apply every 4 to 7 days, or as needed (3 applications recommended).

Field Crops, Vegetables, Fruit Trees: Apply with irrigation water, 2 to 4 quarts per acre every 7 to 10 days (3 applications recommended).

For injector system: use 1 gallon per 350 gallons of water, inject at 1:50 and OK to mix with liquid N-P-K

fertilizer. For specific crop recommendation, consult distributor's fieldmen or contact GROW MORE'S Technical Consultant.
