# *Hydroponic Greenhouse*

*A Symbol of Quality*

**GROW  MORE®**

---

Since 1976, commercial hydroponic production greenhouse growers have depended on quality Grow More products.

Our in house laboratory and hydroponic specialists apply scientific oversight to provide consistent standardized formulas to ensure your operation's success.

More than 14 essential elements are required for proper growth and the high purity ingredients in our formulation reflects our in depth understanding of nutrient mobility as it relates to plant metabolism.

In fact, Grow More, Inc. has developed a line of organic additives that enhance the organoleptic characteristics of many greenhouse crops which lead to improved flavor, aroma and taste.

- |             |   |                       |                        |
|-------------|---|-----------------------|------------------------|
| CELL OUT:   | Foliar applied to prevent or correct nutrient deficiencies occurring during the post flower period of fruit growth.   |                       |                        |
|             | Benefits:   | Larger Fruit          | Improved Bud Formation |
|             |   | More Uniform Size     | Improved Storage       |
|             |   | Higher Solids Content | Keeping Qualities      |
| BIO-COZYME: | Nutrient solution applied, stimulates foliage and root growth, improves organoleptic characteristics.   |                       |                        |
| FUEGO:      | Foliar applied, contributes to a plant reaching its full genetic potential by supplying organic hydrolysate of plant protein, sugars and carbohydrates.                         |                       |                        |
| RIGOLETTO:  | Foliar applied, promoter of plant endogenous defense mechanisms. Formulated with natural occurring plant carbohydrates extracts that play a role in plant immunity and defense. |                       |                        |
