

CCB 2X

CCB is a synergistic combination of essential nutrients complexed with Ascophyllum seaweed extract, a natural source of kinetin.

GENERAL INFORMATION

CCB is a synergistic combination of essential nutrients complexed with Ascophyllum seaweed extract, a natural source of kinetin. CCB supports vigor during both vegetative and flowering - bulking, growth, conditions and under environmental stress condition. CCB is rapidly absorbed due to the coupling of proprietary chelating and complexing ingredients.

Contains 2,000 ppm Kinetin. Common physiological effects of Kinetin are promotion of cell division, cell growth, promotion of fruit growth, regulation of leaf pore opening, delay of senescence, aging process of leaves and plant. Contains cold water processed Ascophyllum, which preserves much of the natural occurring plant hormones, growth factors, organic acids, sugars, carbohydrates and amino acids present in the plant's cytosol.

DIRECTIONS

Designed for use on most all field, vegetable and tree crops, refer to label for timing of application and dosage. Generally rates vary between 4ozs. to 14ozs. per acre (0.25 to 1 liter / HA) depending on the crops.

SUGGESTED DOSAGE RATES

Tree Crops	0.50 - 1 Liter / HA
Rice	0.25 Liter/HA
Corn	0.25 - 0.50 Liter / HA
Potato	0.25 - 0.50 Liter / HA

CHEMICAL COMPOSITION

Nitrogen (N)	1.0%
1.0% Organic Nitrogen	
Calcium (Ca)	1.0%
Magnesium (Mg)	0.05%
Humic Acid	0.50%

SPECIAL FEATURES

- Aids in hormonal balance by controlling Cytokinin to Auxin balance within the plant.
- Increases cell division for denser, higher solids content fruits and grains.
- Increases sugar transport and aids bulking and sizing of fruits, vegetables and grains.
- Keeps limited fruits drop, grain / pod drop.
- Improves pollination and pollen production.
